

# BOCK lub

## Best-in-class: BOCK lub compressor oils

For mobile and stationary  
BOCK compressors with natural  
and synthetic refrigerants

# BOCK

colour the world  
of tomorrow

# The °Clever Art of Protection ...

As clever best-in-class solutions, BOCK compressors ensure the reliable operation of refrigeration systems and heat pumps worldwide. Each component is designed for perfect interaction. The new **BOCK**lub is one of them.

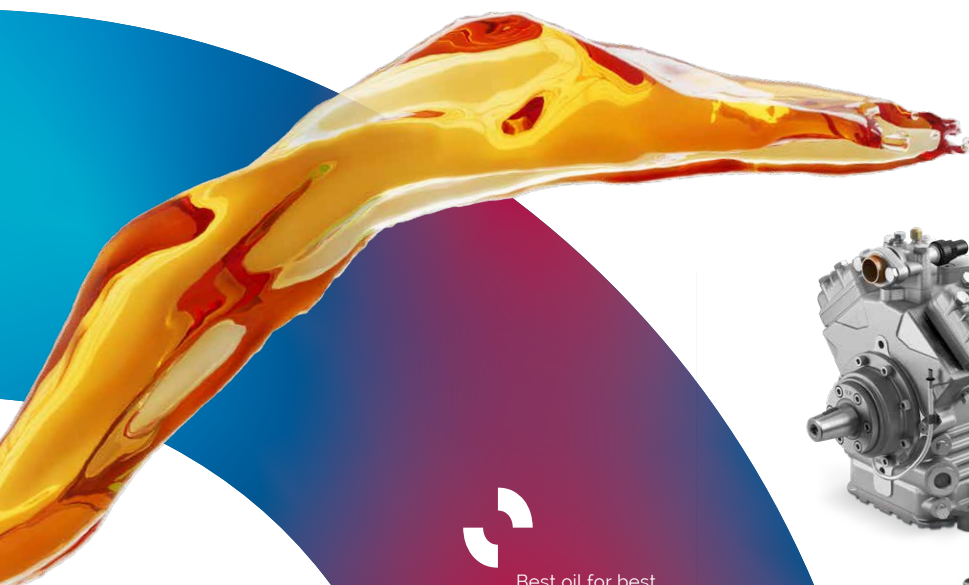

Only the use of precisely fitting compressor oils guarantees the best performance and efficiency of your BOCK compressors. This is a decisive component, also with respect to constantly increasing performance requirements and the use of new refrigerants. As a leading compressor manufacturer, we know best which specifications these oils require. That is why we have developed the **BOCK**lub program for you: Best compressor oils for our mobile and stationary best-in-class solutions – perfectly matched to BOCK compressors with natural and synthetic refrigerants.

## High wear protection, increased efficiency and resource-saving

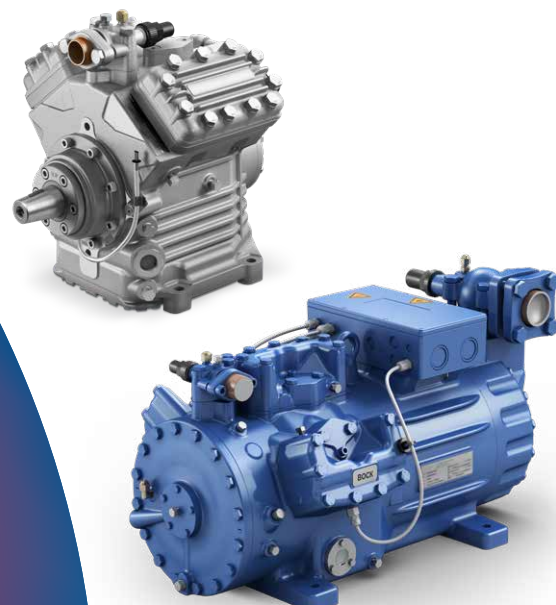

The new **BOCK**lub oils do much more than just provide optimum lubrication: they simultaneously offer high wear protection, increase efficiency, availability as well as service life and, thanks to their special tribological properties, also minimize the energy consumption of the systems. We call this: **The °Clever Art of Protection**

## BOCKlub program

BOCKlub	BOCKlub	BOCKlub	BOCKlub	BOCKlub
	G68	E85	E55	A46
Refrigerant	Hydrocarbons	CO <sub>2</sub> and HFO	HFC and HFO	HCFC

Best oil for best compressors: every drop in original BOCK quality.

## BOCKlub – best-in-class compressor oils

### Tailor-made for mobile and stationary BOCK compressors with natural and synthetic refrigerants:

- Wide range of applications from low temperature to heat pumps
- Excellent viscosity/temperature behavior
- High chemical and thermal stability
- Quality tested in long-term tests
- Regular quality control and validation with new refrigerants
- Excellent chemical compatibility with natural and synthetic refrigerants
- Easy upgrade\* from previously used oils
- Operation limit extension for BOCK HC compressors

\* except BOCK HC compressors

## The most important at a glance

### High wear protection

Extended compressor service life with lower maintenance and maintenance costs

### Increased efficiency

Minimized oil carryover in combination with BOCK compressors: higher cooling capacity, optimized plant efficiency

### Saving resources

High-grade BOCK quality oil designed for highly efficient BOCK compressors: for extra durability and energy savings in operation

**BOCK is one of the world's technology and innovation leaders in the development of environmentally friendly, economical solutions in the field of refrigeration and air-conditioning technology, including heat pumps and heat recovery – with one of the world's largest portfolios of compressors for natural refrigerants such as CO<sub>2</sub> (R744), hydrocarbons and other low-GWP refrigerants.**
