## Semi-hermetic Compressors for Hydrocarbons

### Natural refrigerants are on the advance

For various applications, such as in the field of super-market refrigeration and chiller systems, hydrocarbons have established themselves as another natural alternative. The BOCK compressors of the hydrocarbon series meet all the requirements of the F-gas regulation. They can be used long term and therefore offer increased planning dependability for system manufacturers, users, and investors.

Due to the flammability of hydrocarbons, the compressor and the equipment has some safety related modifications.

### Special features

Based on our current semi-hermetic product range, BOCK now offers an alternative compressor variant especially for use with hydrocarbons.

Compressors in HC design have the following features:

- o Durable driving gear
- o Thermal protection thermostat (recommended)
- o Oil sump heater (necessary)
- o Special oil charge
- o Motor protection INT69 G for installation in the switch cabinet
- o Optimized for all hydrocarbon requirements

### Important notes

We must explicitly point out that these compressors are a special edition and that compressors filled with hydrocarbons are to be operated by trained specialists only. Please see assembly instructions for additional important guidance. To ensure compliance with the safety measures, an additional agreement on hydrocarbons as a refrigerant (Bock Art. No. 09996) has to be signed.

Think **green**,  
choose **blue**.

BOCK Compressors for natural refrigerants

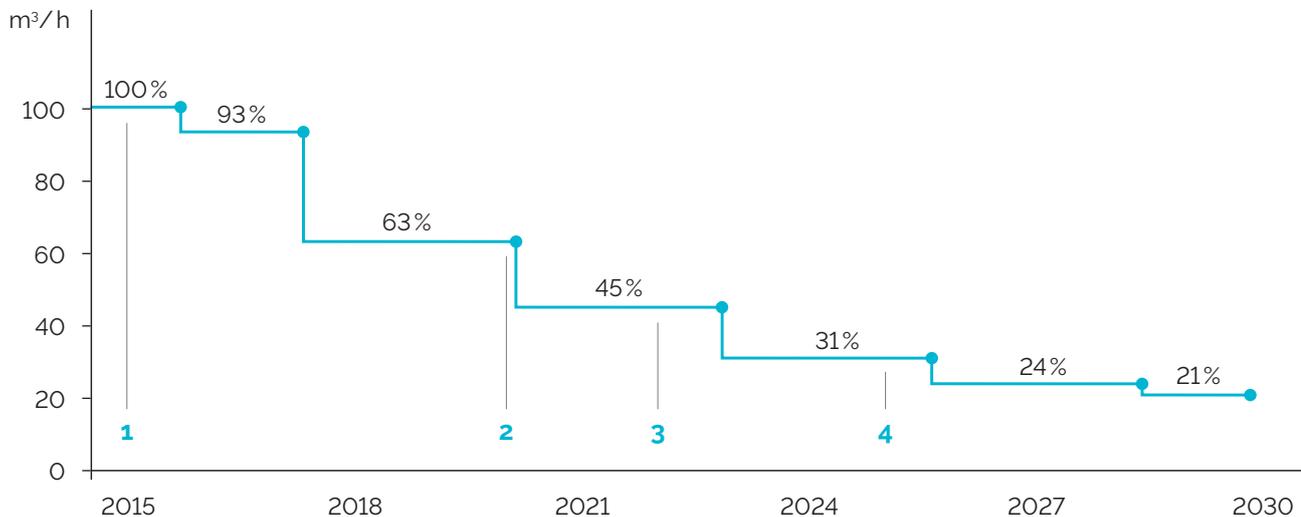

# F-gas regulation – HFC on the way out

Since 2006, the F-gas regulation (EC) No 842 / 2006 has been governing the use of fluorinated hydrocarbons (HFC) in technical refrigeration systems. The reason why emissions into the atmosphere must be kept within limits is that the heat-absorbing properties of HFC represent a cause of the greenhouse effect and global climate warming. Since the beginning of 2015, the new F-gas regulation EU 517 / 2014 is effective. Planners, manufacturers, implementers and operators of refrigeration systems must undergo considerable reorientation. The new directive narrows their choice of applicable refrigerants more than ever, marking a fundamental turn away from refrigerants with a strong greenhouse effect.

The goal set for the year 2030 is to reduce emissions of partly fluorinated hydrocarbons (HFC) to one fifth of the average output of 2009 – 2012. In the near future, equipment for refrigerants with high greenhouse potential will be banned from the market, and refilling of existing systems will be subject to restrictions.

As a technology partner for refrigeration, air-conditioning and heating applications, Bock offers comprehensive advice and support for your switch to the natural refrigerants carbon dioxide (CO<sub>2</sub>) and hydrocarbons (HC). An extensive portfolio of compressors is available for any task.

## Development of market prohibitions

### 1 2015:

Household refrigeration appliances (GWP ≥ 150)

### 2 2020:

Mobile room AC systems (hermetically sealed systems) (GWP ≥ 150)

Stationary refrigeration systems (GWP ≥ 2500)

Prohibited: e.g. R404A, R507

Refrigerators and freezers for commercial use (hermetically sealed systems) (GWP ≥ 2500)

### 3 2022:

Multipack centralized commercial refrigeration systems > 40 kW (GWP ≥ 150) – except primary circuit of cascaded systems (GWP ≥ 1500)

Refrigerators and freezers for commercial use (hermetically sealed systems) (GWP ≥ 150)

### 4 2025:

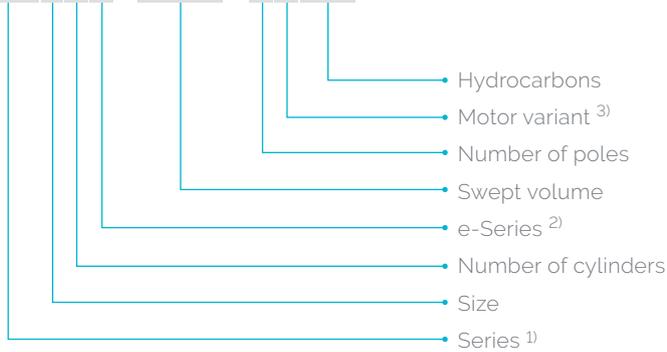

Single-split AC systems < 3 kg charge (GWP ≥ 750)

## At a glance

### Type key – Compressors for hydrocarbons

**HG 56e - 1155 - 4SHC**

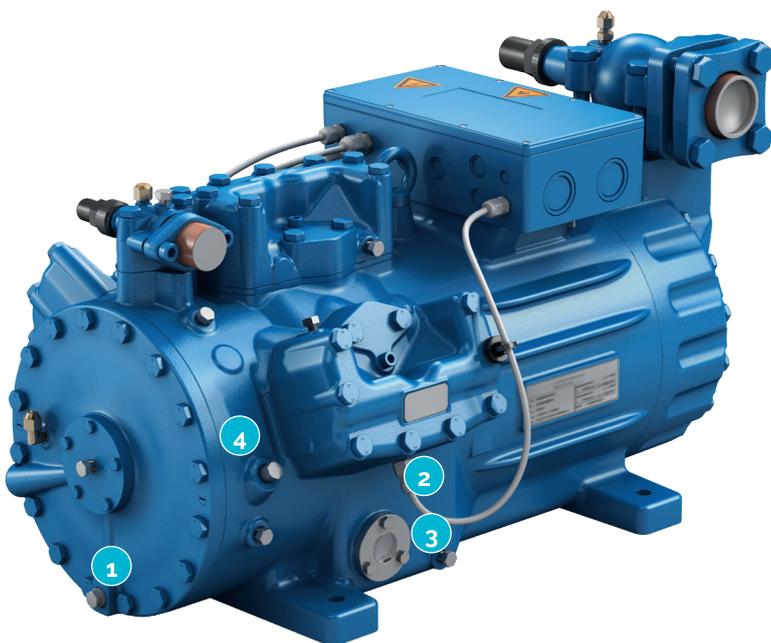

- <sup>1)</sup> HG = Hermetic gas-cooled (suction-gas-cooled)
- <sup>2)</sup> = Additional marker for e-series compressors
- <sup>3)</sup> S = More powerful motor, e.g. air-conditioning applications

### Overview of hydrocarbons

Refrigerant	Composition (formula)	Name	ODP <sup>1)</sup> [R11=1,0]	GWP <sub>(100a)</sub> <sup>1) 2)</sup> [CO <sub>2</sub> =1,0]	Safety group <sup>1)</sup>	Practical limit [kg/m <sup>3</sup> ] <sup>1)</sup>
R290	C <sub>3</sub> H <sub>8</sub>	Propan	0	3	A3	0,008
R1270	C <sub>3</sub> H <sub>6</sub>	Propylen	0	2	A3	0,008

<sup>1)</sup> According to EN378-1:2018-4 <sup>2)</sup> Time horizon 100 years – according to IPCC IV  
Further hydrocarbons on request.

### Differences to a standard compressor

### Optimized for all hydrocarbon requirements

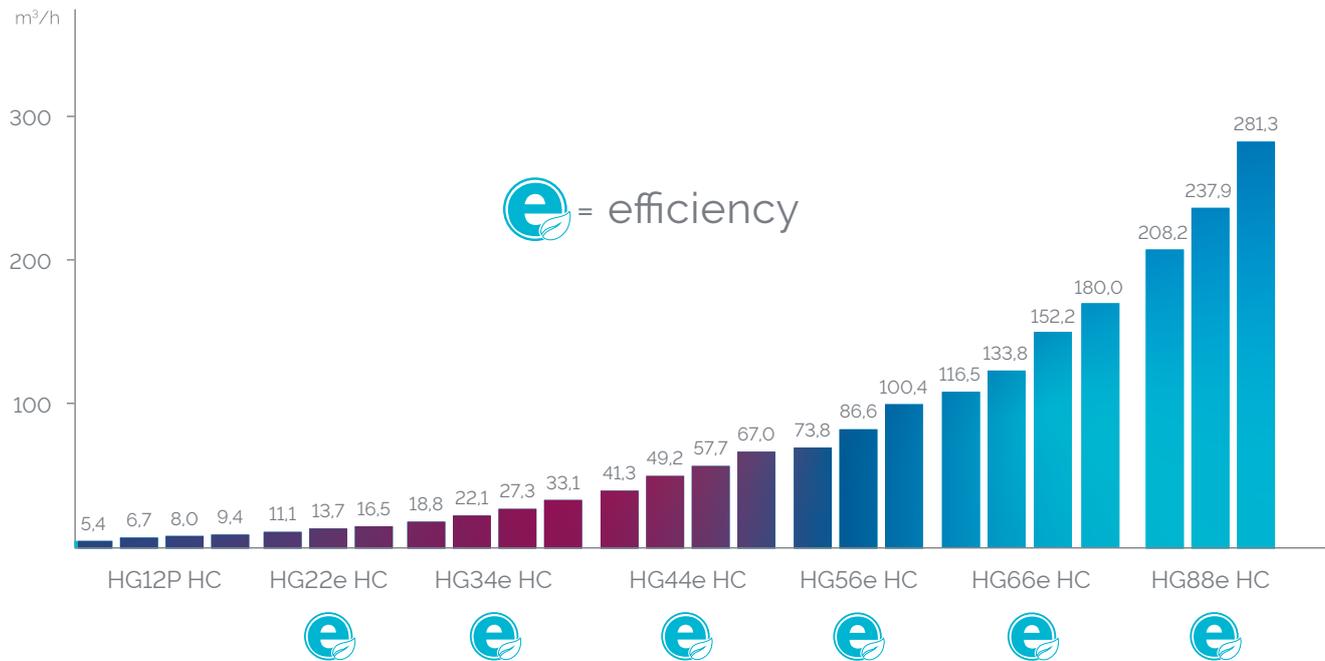

- 1 Oil sump heater (necessary)
- 2 Thermal protection thermostat (recommended)
- 3 Special oil charge
- 4 Durable driving gear for demanding applications with hydrocarbons
- 5 Electronic motor protection INT69 G enclosed for installation in the switch cabinet

# HC Compressors for Hydrocarbons

## At a glance

### The current program

7 model sizes with 25 capacity stages from 5.4 to 281.3 m<sup>3</sup>/h (50 Hz)

With technical optimizations we continuously improve the energy consumption of our compressors. The compressors of the e-series set a new standard when it comes to motor efficiency, gas flow and efficiency of the valve system. All this results in a higher refrigerating capacity of the compressor at a lower drive power.

Additionally, **ATEX compressors** are available that can be operated with hydrocarbons as well. You can find more information on these compressors in our ATEX catalog.

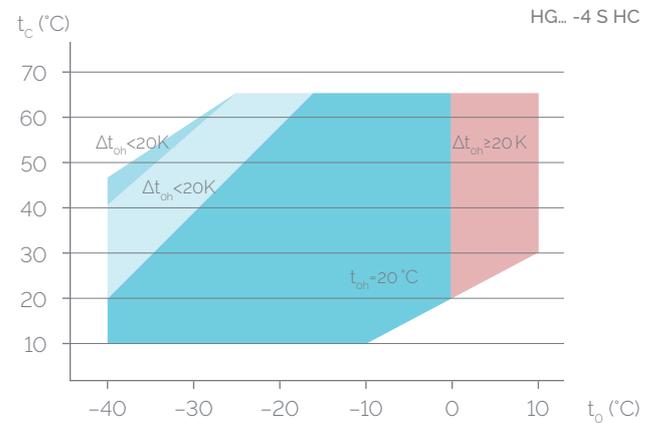

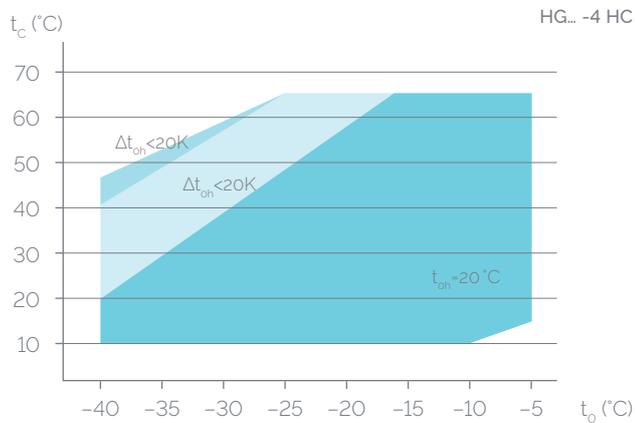

### COMPRESSOR SELECTION PROGRAM

Current information on technical data, performance data, operating limits and much more can be done online via the BOCK compressor selection program (VAP): [vap.bock.de](http://vap.bock.de)

Diagrams for other areas available on request

The use of other hydrocarbons is permitted only following prior written approval from Bock

$t_o$  Evaporating temperature (°C)  
 $t_c$  Condensing temperature (°C)  
 $\Delta t_{oh}$  Suction gas superheat (K)  
 $t_{oh}$  Suction gas temperature (°C)

- Required minimum superheat  $\Delta t_{oh} = 20$  K
- Supplementary cooling or reduced suction gas temperature ( $\Delta t_{oh} < 20$  K)
- Required minimum superheat  $\Delta t_{oh} = 20$  K,  
Suction gas temperature ist dementsprechend anzupassen
- Supplementary cooling and reduced suction gas temperature ( $\Delta t_{oh} < 20$  K)

Max. permissible operating pressure (LP/HP)<sup>1)</sup>: 19/28 bar

<sup>1)</sup> LP = low pressure, HP = high pressure

## Notes

### Operating limits

Compressor operation is possible within the limits shown on the application diagrams. Please note the colored areas. In the dark blue and gray application area a minimum superheat  $\Delta t_{oh} = 20$  K must be applied. If necessary there must be planned an internal heatexchanger IHX. Compressor application limits should not be chosen for design purposes or continuous operation.

### Performance data

The performance data are based on 20 °C suction gas superheat without liquid subcooling, at 50 Hz power supply frequency. These are computed, preliminary values. Variations cannot be excluded. Please follow the guidance regarding suction gas superheat.

Conversion factor for 60 Hz = 1.2

Further information can be found online at [vap.bock.de](http://vap.bock.de)

The performance data are based on 20 °C suction gas superheat without liquid subcooling at 50 Hz power supply frequency. These are computed preliminary values. Variations cannot be excluded. Please observe the following marking notes:

■ Supplementary cooling or reduced suction gas temperature

Conversion factor for 60 Hz = 1.2

Performance data for other operating points, see Bock (VAP) software.

<sup>1)</sup> Evaporating temperature -35 °C / Condensing temperature +40 °C / Suction gas superheat +20 °C

<sup>2)</sup> Evaporating temperature -10 °C / Condensing temperature +45 °C / Suction gas superheat +20 °C

\*EER/COP = Cooling capacityszahl

# HC Compressors for Hydrocarbons

## Technical data

### Explanations

- 1) Tolerance ( $\pm 10\%$ ) relates to the mean value of the voltage range. Other voltages and current types on request.
- 2) The specifications for max. power consumption apply for 50 Hz operation. For 60 Hz operation, the specifications have to be multiplied by the factor 1.2. The max. working current remains unchanged.  
  
Take account of the max. operating current / max. power consumption when designing contactors, leads, and fuses.  
  
Switches: service category AC3.
- 3) 220 – 240 V  $\Delta$  / 380 – 420 V Y - 3 - 50 Hz  
265 – 290 V  $\Delta$  / 440 – 480 V Y - 3 - 60 Hz
- 4) 380 – 420 V Y/YY - 3 - 50 Hz PW  
440 – 480 V Y/YY - 3 - 60 Hz PW  
PW = Part winding, motors for part winding start (no start unloaders required)  
Winding ratio: HG44e, HG56e, HG66e, HG88e = 50% / 50%  
Designs for Y/ $\Delta$  on request.
- 5) For soldering connections.
- 6) The maximum permissible working current of the compressor ( $I_{max\ com}$ ) must not be exceeded. Take account of the guidelines for use of frequency inverter in the compressor assembling instructions.

#### Oil sump heater 110 – 240 V - 1 - 50/60 Hz (option)

- HG12P...HC, HG22e...HC, HG34e...HC: 50 – 120 W
- PTC heater, self-regulating, installation in housing bore

#### Oil sump heater 230 V - 1 - 50/60 Hz (option)

- HG44e...HC: 80 W
- HG56e...HC: 140 W
- HG66e...HC, HG88e...HC: 200 W
- Permanently set version, installation in immersion sleeve

#### COMPRESSOR SELECTION PROGRAM

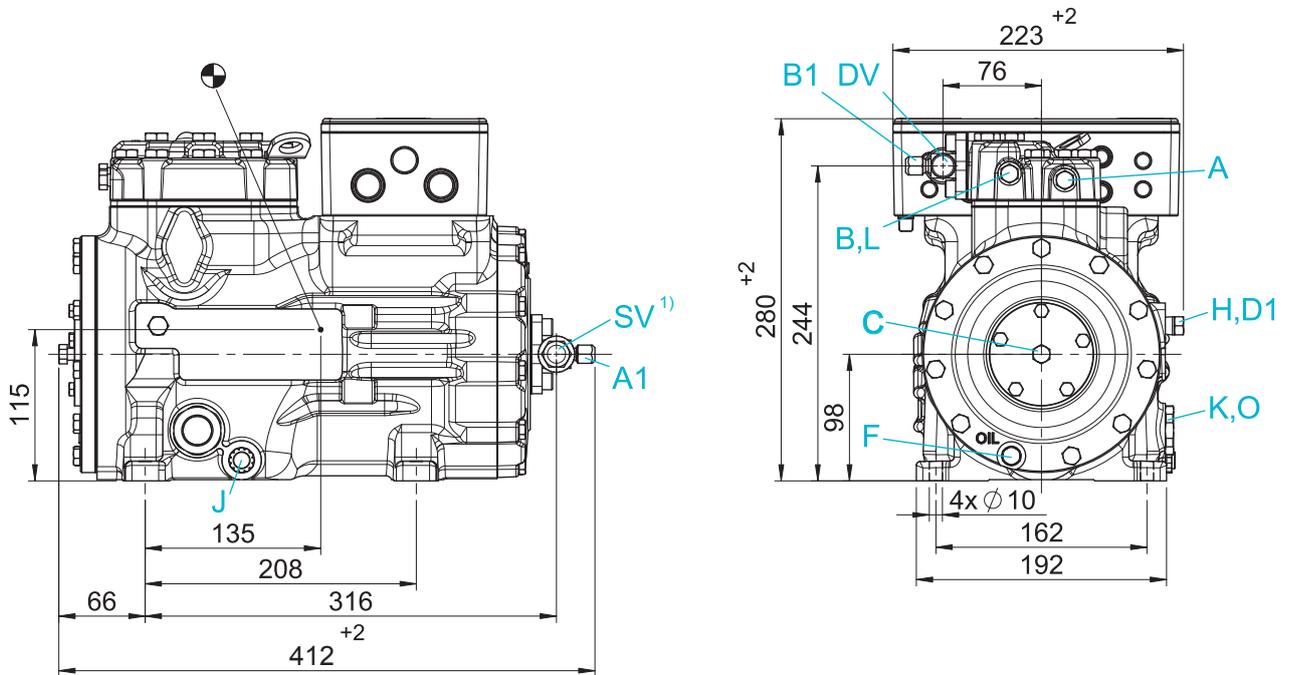

Current information on technical data, performance data, operating limits and much more can be done online via the BOCK compressor selection program (VAP): [vap.bock.de](http://vap.bock.de)

# BOCK service and support

Up-to-date information, training and tools about BOCK CO<sub>2</sub> compressors, compressors for hydrocarbons and solutions for other refrigerants. Use our expertise for your daily practice – online and free of charge

# °Clever + Cool Experts<sup>live</sup>

**BOCKshop** | 

**BOCK CO<sub>2</sub>Tool** | 

**BOCK VAP** | 

From experts for experts – our new online formats can be used from any computer, regardless of location: Office, workshop or even at home.

To ensure that you can make the best possible use of the advantages of BOCK compressors, we support you online and personal with four service and support modules. There you will find valuable information: from plant planning and design to implementation and operation to retrofitting or upgrading existing systems.

## **BOCK** training courses

Together with Danfoss, BOCK offers special (online) user training courses. For this purpose, a complete transcritical supermarket refrigeration system with the latest CO<sub>2</sub> technology is in operation at the BOCK training center – with heat recovery + air conditioning + parallel compression + ejector – in order to make the seminars more practical.

## **BOCKshop**

The online catalog in the **BOCKshop** is the best choice to find spare parts for your BOCK compressor easily and quickly around the clock. Including all Ex-drawings and parts lists as well as further information also for printing.

>> [bockshop.bock.de](http://bockshop.bock.de)

## **BOCKCO<sub>2</sub>Tool**

The strengths of the **BOCKCO<sub>2</sub>Tool** based on Excel: Support for the selection of CO<sub>2</sub> compressors, e.g. by displaying the system schematic as RI flow diagram and refrigeration circuit in log-p-h-diagram, as well as selecting compressors in rack systems and for special CO<sub>2</sub> systems such as booster systems.

>> **Usage on request:** [vap@bock.de](mailto:vap@bock.de)

## **BOCKVAP**

The BOCK compressor selection program (VAP) is the perfect tool, to find suitable compressors or condensing units for your stationary or mobile application: Simply enter cooling capacity and operating conditions and the suitable components will be displayed immediately. In addition, the tool provides you with further information, e.g. application limits, performance data, dimensions and connections, scope of delivery, accessories, 3 D compressor models and much more.

Another advantage: **BOCKVAP** is available to you free of charge as an online and offline version for PC installation.

>> [vap.bock.de](http://vap.bock.de)

**BOCK is one of the world's technology and innovation leaders in the development of environmentally friendly, economical solutions in the field of refrigeration and air-conditioning technology, including heat pumps and heat recovery – with one of the world's largest portfolios of compressors for natural refrigerants such as CO<sub>2</sub> (R744), hydrocarbons and other low-GWP refrigerants.**
